Hi Jill,

I hope all is well!

During our growth workshop in France we have discussed the issue of FAW in laminar air flow theaters. Just some weeks ago (and I was not aware of it), the French society of microbiologists have issued a recommendation to NOT use forced-air warming anymore because of its high risk for the patient to develop a surgical site infection.

On the other hand we had an issued recommendation by the WIP in the Netherlands recommending to continue the use of forced-air warming (please find attached 5.8) .

I will try to get a copy of the French recommendation as well. As soon as we have it, I will set up a call for us to discuss next steps.

Best regards,

Thomas
